

Beyond the Bit Pipes

Mercure Château Chartrons, Bordeaux, France
26 - 29 October 2009

ICIN 2009 – Enabling Service Innovation Come to a real conference

Have you been to a real conference lately? One that is a hype-free zone – liberated from both marketing pitches and the sound of axes grinding? One that is attended by the real insiders in the industry – the people who are genuinely driving the future?

To see what you have been missing check out the full details of the ICIN 2009 Programme [here](#).

Leading experts from all sectors of the ICT industry are meeting in Bordeaux, France, October 26-29, 2009 to report on the latest results from R&D laboratories and share insight into the future of telcos and webcos.

The [ICIN 2009](#) conference addresses key issues, including business models, technical implementations and field experience, with presentations from leading players in the ICT arena: network and service providers, vendors and analysts.

“We are very proud of the content to be presented at ICIN 2009.” says Dan Fahrman, chairman of the ICIN 2009 Technical Programme Committee, “During the last few years the speed available in ‘bit pipes’ has increased radically. We can now buy Megabit cellular access and Gigabit fixed access off the shelf. So now you have the new bit pipe, attend ICIN 2009 and we will show you some new ideas on how to fill it.”

Only one week left to register. Go to www.icin.biz for full information.
